

Before the service

- ☐ Be ready at the scheduled time: we work on a route and each visit has its slot.
- ☐ Clean the kitchen, bedrooms and living room thoroughly before the service.
- ☐ Empty the kitchen drawers holding utensils and food so they can be treated.
- ☐ Move furniture, beds and side tables away from the walls so the technician can cover the whole perimeter.
- ☐ Take dry food out of the pantry, and kitchen utensils too, and leave them on a table covered with a black bag.
- ☐ Show the technician where you've seen the pest most.

During

- ☐ The service takes 30 to 40 minutes depending on size and complexity; nobody can stay inside during that time.
- ☐ Children, older adults, pregnant women, people with disabilities, allergies or asthma, and pets must stay out for 3 to 4 hours, until the product is completely dry.

After

- ☐ Air out the home before occupying it again.
- ☐ Wash kitchen utensils before using them.
- ☐ Don't mop treated areas over the following days, except surfaces where food is prepared.
